

ABSTRACT OF THE DISCLOSURE

A method is disclosed for conducting a clinical study according to which an event occurs during the study that requires a collaboration of individuals responsible for the study. The method includes transmitting the event to a collaboration system. The collaboration system determines, based on parameters assigned to the event, a group of individuals responsible for the study required for the collaboration. The collaboration system provides a communications platform for the group. The group carries out the collaboration while using the communications platform. Finally, the collaboration system verifies the collaboration on the basis of predetermined verification criteria.
